Pet Adoption & Shelter Management System

Use-Case Flow Specification

Use Case: Submit Adoption Application

Actor

Adoption Applicant

Preconditions

1. The Adoption Applicant has selected an animal that is currently available for adoption.
2. The animal has a valid record in the system.
3. The Adoption Applicant has access to the adoption application form.
4. The required adopter questionnaire is available.

Main Success Scenario

1. The Adoption Applicant selects the animal they want to adopt.
2. The system displays the selected animal's details and current availability.
3. The applicant chooses the option to apply for adoption.
4. The system displays the adoption application and screening questionnaire.
5. The applicant enters the required personal and adoption-related information.
6. The applicant submits the completed application.
7. The system checks that all required information has been provided.
8. The system saves the application and links it to the selected animal.
9. The system sets the application status to **Pending Review**.
10. The system displays a confirmation that the application has been submitted successfully.

Postconditions

1. The adoption application is stored in the system.
2. The application is linked to the selected animal and the applicant.
3. The application status is set to **Pending Review**.
4. The application is available for Shelter Staff to review.

Alternate Flow – Required Information Missing

1. The applicant submits the application without completing one or more required fields.
2. The system checks the submitted information and finds that some required details are missing.
3. The system displays a message asking the applicant to complete the missing information.
4. The applicant enters the missing details.
5. The system checks the information again.
6. If all required information is provided, the application is submitted and its status is set to **Pending Review**.
